DUSTIN JAEGER

IT Infrastructure Manager | Cloud Migration | AI Enablement & Governance

Las Vegas, NV · dustin@dustinjaeger.net
dustinjaeger.net · linkedin.com/in/dustinjaeger

PROFESSIONAL SUMMARY

IT infrastructure leader with 15+ years of progressive experience across global enterprise technology and regulated gaming environments. Currently leading a global systems administration team at an enterprise software support company, owning core infrastructure across 10+ international offices. Recently helped deliver an enterprise-wide datacenter-to-Azure migration—driving pre-migration server rationalization so a majority of legacy workloads were retired rather than lifted-and-shifted—and helped stand up governed adoption of Microsoft 365 Copilot, Copilot Cowork, and Copilot Studio. Track record of measurable results: **$300K/year** storage consolidation savings, **$2M+** in multi-property energy reductions, and global cloud VDI transformations. Hands-on enough to build the automation, write the scripts, and run the cutover bridge.

CORE COMPETENCIES

Cloud & Migration:	Microsoft Azure, landing zones, Azure Migrate, hybrid connectivity, AWS EC2 & WorkSpaces, large-scale rehost & decommission programs
AI & Automation:	Microsoft 365 Copilot, Copilot Cowork, Copilot Studio agents, AI governance, access & consumption controls, PowerShell, Python, Bash, SQL
Infrastructure:	VMware vSphere/vCenter, Hyper-V, HPE Nimble, NetApp, HP Synergy/blade, Cisco UCS/FlexPod, SAN/NAS, HCI, capacity planning
Identity & Security:	Active Directory, Entra ID, Okta, SailPoint, PKI, Palo Alto Prisma SASE, Delinea PAM, Proofpoint, LAPS, DMARC/DKIM
Data Protection & DR:	Cohesity, Rubrik, Veeam, Zerto, VMware SRM, Azure Backup, RTO/RPO engineering
Leadership:	Global team leadership, hiring & performance reviews, executive SWOT & roadmaps, multi-year ROI modeling, vendor & partner management

PROFESSIONAL EXPERIENCE

Rimini Street, Inc.

Las Vegas, NV | Global Enterprise Software Support

Manager, Systems Administration — Sep 2022 – Present

CLOUD TRANSFORMATION: DATACENTER-TO-AZURE MIGRATION

- Key infrastructure leader on an enterprise-wide program moving business applications and data from on-premises VMware datacenters to **Microsoft Azure**, collaborating with external migration partners, project management, application owners, and network, security, and R&D teams.
- Drove pre-migration server estate assessment and rationalization—retiring a significant majority of legacy workloads prior to cutover to right-size the footprint and avoid unnecessary cloud spend before commitment.
- Executed a structured multi-wave **Assess, Migrate, Validate** framework with owner sign-off, test migrations, and validated rollback plans across directory services, file services, collaboration and development platforms, and client-facing application cutovers.
- Built custom reconciliation and validation tooling to track migration progress, decommissioning, and backup coverage status across the global server estate.

AI ENABLEMENT & GOVERNANCE

- Early adopter and internal champion for **Microsoft 365 Copilot and Copilot Cowork**, helping establish scoped role-based access and consumption governance controls.
- Designed and built an automated workflow and time-classification agent in **Copilot Studio** that categorizes weekly calendar and Teams activity into project, operations, and administrative entries to reduce administrative toil across engineering teams.
- Contributed to enterprise **Copilot Studio and AI governance frameworks**, including agent lifecycle management, evaluation, approval, and publishing standards alongside AI trust and Azure health engagements.
- Applied AI tooling to analysis-heavy infrastructure engineering, including large-scale VM inventory reconciliation, capacity modeling, and scripted phased power-on orchestration across virtualization clusters.

TEAM LEADERSHIP & STRATEGY

- Lead a global systems administration team supporting enterprise infrastructure across **10+ international offices**; own hiring, onboarding, quarterly performance reviews, and promotion advocacy.
- Designed structured team goal frameworks balancing core operational reliability, professional development, and strategic engineering initiatives.
- Author and present annual **State of the Infrastructure SWOT** analyses, multi-year technology roadmaps, and multi-year ROI/cost-optimization models to IT executive leadership across licensing, hosting, and backup platforms.

INFRASTRUCTURE DELIVERY & MODERNIZATION

- Directed multi-year infrastructure modernization roadmaps covering SASE/VPN, identity governance automation, LAPS, remote desktop redesign, virtualization upgrades, compliance tooling, and email authentication (DMARC/DKIM).
- Led enterprise-wide legacy Windows Server retirement and OS modernization programs across the virtualized server estate.
- Scaled a global **AWS WorkSpaces VDI** and thin-client footprint across multiple international regions to support distributed workforce growth.
- Relocated and modernized disaster recovery datacenter operations, reducing colocation overhead while maintaining strict enterprise RPO/RTO targets.
- Drove Active Directory functional-level modernization, a full MFA rollout, and new office buildouts across the US and APAC.

Lead System Administrator — Jan 2022 – Sep 2022

- Served as technical cutover owner for complex infrastructure programs spanning compute, identity, and cloud integrations.
- Migrated international office workloads from on-premises virtualization to **AWS EC2**, eliminating substantial recurring hypervisor licensing and hardware overhead.
- Turned around an at-risk enterprise content migration project and delivered on schedule using an automated cross-vendor transfer pipeline.
- Restructured Active Directory group architecture to enable Service Desk self-service and automated onboarding provisioning.
- Acted as technical escalation lead for enterprise incidents between systems, network, and security teams.

Sr. Systems Administrator — May 2020 – Jan 2022

- **Storage & SAN SME:** Led enterprise HPE Nimble installation, SAN storage migrations, and VMware SRM integration that replaced aging legacy storage arrays.
- Drove enterprise-wide VMware ESXi and vCenter upgrades, high-availability SQL clustering, and blade compute expansions with N+1 HA.
- Built out enterprise PKI infrastructure and strengthened Active Directory security policies and certificate services.
- Managed backup replication, disaster recovery readiness, and storage tier optimization across multi-site environments.

Penn National Gaming / Hollywood Casinos — Las Vegas, NV

Systems Engineer — Oct 2018 – May 2020

- Consolidated six legacy SANs into one all-flash NetApp array, saving **$300K/year** and reducing the datacenter footprint to six racks.
- Modernized backup from tape to disk-to-disk to full DR replication on **Rubrik** with zero data loss.
- Served as infrastructure SME through a full company acquisition, maintaining operational continuity during integration.

Pinnacle Entertainment — Las Vegas, NV

Systems Engineer / IT Business Analyst — Oct 2015 – Oct 2018

- Delivered **$2M+ in energy savings** by removing unneeded hardware across 15 properties without reducing operational capacity.
- Built and supported **FlexPod UCS, NetApp, and VMware** across 15 properties and **2,700+ endpoints**; led enterprise P2V migrations.

Earlier Experience — St. Louis Area, MO

Systems Analyst, River City Casino & Hotel (2014–2015) | **Associate Systems Analyst**, Ameristar Casino (2009–2014) — *Team Leader of the Quarter, March 2013*.

CERTIFICATIONS & TRAINING

CompTIA Linux+ | PCI Standards & Data Security | Palo Alto Prisma (SASE) | Microsoft Copilot Studio Maker Enablement | HP & AWS Conference Training
